Approval

In the marketplace solution, once the payment has been processed by iyzico, the funds are securely held in a protected pool until the submerchant grants approval for the payment breakdown or specific product. During this period, the submerchant has the flexibility to cancel the payment, issue a refund for a particular item, or provide approval for the fund transfer if the product has been successfully delivered to the buyer and the transaction has been completed without any issues. Additionally, the submerchant can withdraw their approval for the transaction if necessary.

For such usages iyzico offers 2 ways of finalize the payment;

- Approve
- Disapprove

> Please note that iyzico does not have the capability to grant product approvals. Since there is no corresponding function available in the control panel, these approvals must be sent programmatically at the code level.

Approve

To provide approve for a product, you must provide the payment breakdown ID (paymentTransactionId). The service will return the ID of the approved payment breakdown (paymentTransactionId).

Approve Request

`POST` `https://api.iyzipay.com/payment/iyzipos/item/approve`

Request Body

Name	Type	Description
locale	String	Language (default: tr)
conversationId	String	If set, conversation ID to match request and response
paymentTransactionId*	String	ID of basket item. Merchants should keep payment ID in their system that comes in payment responses

200: OK

```
{
    "status":"success",
    "locale":"tr",
    "systemTime":1686434789050,
    "conversationId":"123456789",
    "paymentTransactionId":"20947103"
}
```

Approve Response

Parameters to be returned from the service are as follows:

Output Name	Type	Description
paymentTransactionId	String	ID of basket item. Merchants should keep payment ID in their system
status	String	Service response result (success / failure)
errorCode	String	Error code if service response status is failure
errorMessage	String	Error message if service response status is failure
errorGroup	String	Error group if service response status is failure
locale	String	Language (default: tr)
systemTime	Integer	Response system timestamp value
conversationId	String	If set, conversation ID to match request and response

Approve Sample Codes

PHP | .NET | JAVA | NodeJS | Python | Ruby | JSON

```
iyzipay.approval.create({
    locale: Iyzipay.LOCALE.TR,
    conversationId: "123456789",
    paymentTransactionId: "1"
}, function (err, result) {
    console.log(err, result);
    done();
});
```

Disapprove

To withdraw the approval for a product, please provide the payment breakdown ID (paymentTransactionId). The service will return the ID of the revoked approval for the payment breakdown (paymentTransactionId).

Disapprove Request

`POST` `https://api.iyzipay.com/payment/iyzipos/item/disapprove`

Request Body

Name	Type	Description
locale	String	Language (default: tr)
conversationId	String	If set, conversation ID to match request and response
paymentTransactionId*	String	ID of basket item. Merchants should keep payment ID in their system

200: OK

```
{
    "status":"success",
    "locale":"tr",
    "systemTime":1686434789050,
    "conversationId":"123456789",
    "paymentTransactionId":"20947103"
}
```

Disapprove Response

Parameters to be returned from the service are as follows:

Output Name	Type	Description
paymentTransactionId	String	ID of basket item. Merchants should keep payment ID in their system
status	String	Service response result (success / failure)
errorCode	String	Error code if service response status is failure
errorMessage	String	Error message if service response status is failure
errorGroup	String	Error group if service response status is failure
locale	String	Language (default: tr)
systemTime	Integer	Response system timestamp value
conversationId	String	If set, conversation ID to match request and response

Disapprove Sample Codes

PHP | .NET | JAVA | NodeJS | Python | Ruby | JSON

```
iyzipay.disapproval.create({
    locale: Iyzipay.LOCALE.TR,
    conversationId: '123456789',
    paymentTransactionId: '1'
}, function (err, result) {
    console.log(err, result);
    done();
});
```
