Marketplace Implementation

Steps

The iyzico marketplace solution primarily encompasses the collection and settlement processes. The integration involves three key steps, as outlined below:

1. Submerchant
2. Online Payment
3. Approval

To facilitate fund transfers to sellers (submerchants), it is necessary to register these sellers with iyzico API through a one-time registration process. Upon registering the submerchant seller with iyzico, the merchant receives a unique **subMerchantKey** in the response.

During the payment process, the corresponding **subMerchantKey** for each product's seller in the shopping cart must be provided, along with the specific amount to be transferred to the seller (**subMerchantPrice**).
